

Double Head Spot Weld Equipment 90KVA 50HZ / 60HZ Medium Frequency

Our Product Introduction

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: Jin Hongxiang
- Certification: CE
- Model Number: JD-150
- Minimum Order Quantity: 1 set
- Price: Negotiable
- Packaging Details: Export safety wooden case
- Delivery Time: 5-10 working days. Or negotiation
- Supply Ability: 50 Set/Sets per Month

Product Specification

- Product Name: Spot Welder
- Applicable Industries: Building Cover Plate, Railway / Road Guardrail, Pet Cage, Storage Rack, Net Basket
- Rated Capacity: 90KVA
- Usage: Welding, Multi-point Welding
- Voltage: 380V, 50HZ
- Key Selling Points: Taiwan's Water-cooled Wet Control Transformer Will Not Be Affected By Overload
- Weight (KG): 500 KG
- Control System: Touch Electric Box Control
- Cylinder Stroke: 50MM
- Nominal Frequency: 50/60HZ
- Feature: Sufficient Power, Beautiful Welding, Firm And Fast Response
- Port: Shenzhen, China

Product Description

Medium frequency double head spot welder 90KVA

Double head spot welding machine can greatly improve production efficiency,
If the power supply of spot welding machine is medium frequency transformer, it is medium frequency spot welding machine. Generally, the power supply of spot welding machine is AC spot welding machine.

Use of intermediate frequency spot welder

Medium frequency spot welding machine is applied to spot welding and multi-point projection welding of low-carbon steel plate, stainless steel plate, galvanized plate, aluminum plate, cold-rolled plate, nut welding, bolt welding, electric water heater, air conditioner back plate, stainless steel strip, elevator door plate, wire, resistance brazing and spot welding of copper wire in high and low voltage electrical industry, brazing of silver spot and copper plate, composite silver spot welding, etc.

Automobile manufacturing: spot welding and nut projection welding of high-strength steel and hot formed steel, automobile motors, automobile oil casings, automobile shock absorbers, automobile clutch transmission parts, aluminum plate spot welding, automobile nut spot welding, automobile sunroof welding, automobile fuel tank cap and other welding.

which can be divided into several types:

One is:

Double cylinder+1 transformer. Two cylinders can be welded at the same time or by stages. At the same time, the current is divided during welding, and the current setting is the same. The current can be set differently during sub welding.

The interval time of sub welding is within 0.5 s.

Two are:

Double cylinder+2 transformers. In some welding products, there are two welding points, which can be welded at the same time, and the current can be set to different sizes, so the welding effect is better.

Of course, there are many other cases, all of which are customized according to the product, in order to improve the welding requirements and welding efficiency of the product.

Tooling or fixture of the machine

The spot welding machine is a row welding machine. Because of the different products, it is necessary to do some positioning tooling or fixtures for the workpiece to facilitate more suitable welding of the workpiece. These can be customized as required. The main machine remains unchanged.
